**Diagnose info:**

Illness Name	Melanoma-pancreatic cancer syndrome
Illness ID:	404560

**Illness description:**

what is Familial atypical multiple mole melanoma syndrome?

**Symptoms:**

Familial atypical multiple mole melanoma (FAMMM) syndrome is an inherited genodermatosis characterized by the presence of multiple melanocytic nevi (often >50) and a family history of melanoma as well as, in a subset of patients, an increased risk of developing pancreatic cancer (see this term) and other malignancies.
